

Ideation Phase

Brainstorm & Idea Prioritization

Date	17 September 2026
Team ID	Individual
Project Name	Incident Lifecycle Automation in ServiceNow
Maximum Marks	4 Marks

Project: Incident Lifecycle Automation in ServiceNow

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement: IT incidents reported through emails, phone calls, or informal communication can be difficult to classify, assign, track, escalate, and resolve consistently. The project aims to automate and standardize the Incident Management lifecycle in ServiceNow, from incident creation through resolution and knowledge creation.

Selected solution direction: Develop an end-to-end ServiceNow Incident Lifecycle Automation workflow integrating Incident Management with Knowledge Management, Change Management, SLA tracking, assignment/escalation, and child incident management.

Step-2: Brainstorm, Idea Listing and Grouping

Idea	Group	Description
Incident Creation & Classification	Incident Management	Standardize incident creation, category, subcategory, urgency, service, service offering, and CI details.
Knowledge Integration	Knowledge Management	Use Agent Assist and Knowledge articles to support faster troubleshooting and resolution.
Assignment & Escalation	Incident Management	Route incidents from Service Desk to the appropriate Level 2 support group and maintain ownership.
SLA Tracking	ITSM / SLA	Track task SLAs and validate timely incident handling.
Change Management Integration	Change Management	Place an incident on hold when a change is required and link the change request to the incident.
Child Incident Management	Incident Management	Create child incidents for related user issues and maintain parent-child tracking.
Resolution & Cause Documentation	Incident Resolution	Capture probable cause, resolution code, and resolution notes before resolving the incident.
Knowledge Article Creation	Knowledge Management	Create a knowledge article from the resolved incident so the documented solution can be reused.

Step-3: Idea Prioritization

The ideas are prioritized using the template's two dimensions: Importance and Feasibility. The selected implementation focuses on features that directly support the complete incident lifecycle and can be demonstrated in the ServiceNow ITSM environment.

Idea / Solution	Importance	Feasibility	Decision
End-to-End Incident Lifecycle Automation	High	High	Selected
Incident Classification & Assignment	High	High	Selected
Knowledge Integration / Agent Assist	High	High	Selected
Change Management Integration	High	Medium	Selected
SLA Tracking	High	High	Selected
Child Incident Management	Medium	High	Selected
Knowledge Article Creation	Medium	High	Selected
Additional advanced integrations	Medium	Low	Future / Not included

Final prioritized concept:

Incident Lifecycle Automation in ServiceNow, A structured workflow that supports incident creation, classification, knowledge assistance, reassignment/escalation, Level 2 investigation, change handling, child incident creation, resolution, knowledge creation, SLA tracking, and final validation.
