

Project Design Phase Data Flow Diagram & User Stories

Date	17 September 2026
Team ID	Individual
Project Name	Incident Lifecycle Automation in ServiceNow
Maximum Marks	4 Marks

The DFD below represents the main information flow for the ServiceNow Incident Lifecycle Automation solution.

DFD Level 0 - Incident Lifecycle Automation in ServiceNow

DFD interpretation:

End users report incidents; Service Desk agents create and classify them; the Incident Lifecycle process routes incidents to Level 2 support, uses the Knowledge Base, tracks SLAs and related records, and connects to Change Management when a change is required. Resolution and status information are returned to the user.

User Stories

The following user stories are tailored to the project's Incident Management, Knowledge Management, Change Management, SLA, and related-record workflow.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
End User	Incident Management	USN-1	As an end user, I can report an IT issue so that an incident record can be created and tracked.	Incident is created with caller and short description and receives an incident number.	High	Sprint-1
Service Desk Agent	Incident Classification	USN-2	As a Service Desk agent, I can classify an incident using category, subcategory, urgency, service, service offering, and CI.	Required incident details are saved and the incident can be routed to the appropriate support group.	High	Sprint-1
Service Desk Agent	Knowledge Management	USN-3	As a Service Desk agent, I can search Agent Assist and attach a relevant Knowledge article to an incident.	Relevant article is displayed, can be attached, and the attachment appears in the incident activity.	High	Sprint-1
Service Desk Agent	Assignment & Escalation	USN-4	As a Service Desk agent, I can reassign an incident to the Network/Level 2 support group when advanced investigation is required.	Assignment group changes to Network and the incident is available to the Level 2 technician.	High	Sprint-1
Level 2 Technician	Incident Investigation	USN-5	As a Level 2 technician, I can open the assigned incident, review its	Technician can access incident details, Knowledge	High	Sprint-1

			details and related information, and investigate the issue.	information, and SLA information.		
Level 2 Technician	Change Management	USN-6	As a Level 2 technician, I can place an incident on hold when a change is required to resolve it.	Incident state becomes On Hold with reason Awaiting Change and the related change activity is recorded.	High	Sprint-2
Service Desk Agent	Child Incident Management	USN-7	As a Service Desk agent, I can create a child incident for another user affected by the same issue.	Child incident is created and is listed under the parent incident's Related Records.	Medium	Sprint-2
Level 2 Technician	Incident Resolution	USN-8	As a Level 2 technician, I can document the probable cause and resolution before resolving the incident.	Cause, resolution code, and resolution notes are saved and the incident moves to Resolved.	High	Sprint-2
Service Desk Agent	Knowledge Creation	USN-9	As a Service Desk agent, I can create a Knowledge article from a resolved incident.	Knowledge article is created in the IT Knowledge Base and is visible in the related records.	Medium	Sprint-2
Service Desk Agent	SLA & Validation	USN-10	As a Service Desk agent, I can track SLA information and verify the complete incident lifecycle.	SLA information is visible and parent/child incident, change, and Knowledge records are validated.	High	Sprint-2

Project flow represented by the stories:

Incident Creation → Classification → Knowledge Integration → Reassignment/Escalation → Level 2 Investigation → Change Handling → Child Incident → Resolution → Knowledge Creation → SLA/Final Validation.
