

Project Design Phase Solution Requirements (Functional & Non-functional)

Date	17 September 2026
Team ID	Individual
Project Name	Incident Lifecycle Automation in ServiceNow
Maximum Marks	4 Marks

The requirements below are adapted to the ServiceNow Incident Lifecycle Automation project and follow the Functional / Non-functional Requirements structure in the template.

Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Record Creation	Create an incident with caller, short description, description, and required incident details.
FR-2	Incident Classification	Classify incident using category, subcategory, urgency, service, service offering, and configuration item.
FR-3	Assignment & Escalation	Assign incidents to Service Desk and reassign/escalate to Network / Level 2 support when required.
FR-4	Knowledge Integration	Use Agent Assist to find relevant Knowledge articles and attach an article to the incident.
FR-5	Change Management Integration	Place an incident on hold when a change is required and associate the related change activity.
FR-6	Child Incident Management	Create and track child incidents from the parent incident's Related Records.
FR-7	Incident Resolution	Record probable cause, resolution code, resolution notes, and resolve the incident.
FR-8	Knowledge Creation	Create a Knowledge article from the resolved incident and verify it in Related Records.
FR-9	SLA & Related Record Tracking	View SLA information and validate Incident, Child Incident, Change, and Knowledge relationships.
FR-10	Lifecycle Validation	Validate the complete incident lifecycle from creation through resolution and final validation.

Non-functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Service Operations Workspace should provide a clear and structured interface for creating, classifying, assigning, tracking, and resolving incidents.
NFR-2	Security	Access to incident, Knowledge, and Change functions should be

		controlled through appropriate ServiceNow roles and permissions.
NFR-3	Reliability	Incident records, related records, work notes, resolution details, and workflow updates should be stored consistently throughout the lifecycle.
NFR-4	Performance	Incident creation, classification, Knowledge search, assignment, and related-record access should respond efficiently during normal use.
NFR-5	Availability	The ServiceNow ITSM environment should be accessible to authorized users when incident management activities are required.
NFR-6	Scalability	The workflow should support increasing numbers of incidents, support groups, Knowledge articles, and related records without redesigning the core lifecycle.

Requirement Summary:

The solution covers the incident lifecycle from creation and classification through assignment, Knowledge assistance, Level 2 investigation, change handling, child incident management, resolution, Knowledge creation, SLA tracking, and final validation.
